Using the Keyboard

The following tables show what keys to press to perform various actions with Word. For some actions you use key combinations, pressing two or more keys at the same time. Key combinations are shown as key names separated by a hyphen.

Entering Special Characters

| For | Press |
|--------------------|--|
| Regular space | Spacebar |
| Tab mark | Tab |
| Paragraph mark | Return or Enter |
| Nonbreaking space | Option-spacebar or Command-spacebar |
| Nonbreaking hyphen | Command-~ |
| Optional hyphen | Command- – (hyphen) |
| End-of-line mark | Shift-Return |
| Page break mark | Shift-Enter |
| Section mark | Command-Enter |

Pulling Down Menus

| То | Press period on keypad and |
|---|--|
| Pull down a menu by letter | First letter of the menu |
| Pull down a menu by number | 0-8. 0 pulls down the Apple menu, 1 the File menu, and so on. 8 pulls down the Work menu when it is present. |
| Move to another menu once a menu has been pulled down | ← or → |

To choose a command once a menu has been pulled down, press the first letter of the menu or press \uparrow or \downarrow , then press Enter or Return.

Using Keys in Dialog Boxes

| To move | Press |
|------------------------------|---|
| To next text box | Tab |
| To previous text box | Shift-Tab |
| Up in list box | 1 |
| Down in list box | + |
| To next group of options | - |
| To previous group of options | - |
| To next option | Command-Tab or period on keypad |
| To previous option | Command-Shift-Tab |
| То | Press |
| "Click" item | Command-spacebar or 0 on keypad |
| "Click" item directly | Command-letter (first letter of option or button) |
| Open folder | Command- |
| Close folder | Command- |
| Scrolling and Selecting | |

Scrolling and Selecting

| То | Press |
|-------------------------------|------------------|
| Scroll up | Command-Option-[|
| Scroll down | Command-Option-/ |
| Select whole document | Command-Option-M |
| Extend selection to character | - on keypad |

Moving the Insertion Point

| To move insertion point | Press |
|-------------------------|--------------------------|
| Up | or 8 on keypad |
| Down | or 2 on keypad |
| Left | or 4 on keypad |
| Right | → or 6 on keypad |
| Left one word | Command-4 on keypad |
| Right one word | Command-6 on keypad |
| Beginning of line | 7 on keypad |
| End of line | 1 on keypad |
| Previous sentence | Command-7 on keypad |
| Next sentence | Command-1 on keypad |
| Previous paragraph | Command-8 on keypad |
| Next paragraph | Command-2 on keypad |
| Top left of screen | Command-5 on keypad |
| Up screen | 9 on keypad |
| Down screen | 3 on keypad |
| Beginning of document | Command-9 on keypad |
| End of document | Command-3 on keypad |
| Editing | |
| To delete | Press |
| A selection | Backspace |
| Character to right | Command-Option-F |
| Previous word | Command-Option-Backspace |
| Next word | Command-Option-G |

| То | Press |
|---|------------------------------------|
| Copy text | Command-Option-C* |
| Move text | Command-Option-X* |
| Copy formatting | Command-Option-V* |
| Paste special character | Command-Option-Q |
| Cancel operation in progress | Command (period) |
| Repeat last command | Command-A |
| Repeat last Find command | Command-Option-A |
| Search for formatting | Command-Option-R* |
| Insert paragraph mark after insertion point | Command-Option-Return |
| Move insertion point to previous location | Command-Option-Z or 0 on keypad |
| Activate another window | Command-Option-W |
| Make active window full screen size or return window to previous size | Command-Option-] |
| Split active window or remove split | Command-Option-S |
| Open or close footnote window | Shift-Command-Option-S |
| Insert glossary entry | Command-Backspace* |
| Insert formula character | Command-Option-\ (backslash) |
| Transform selection to MacDraw graphic | Command-Option-D |

*These key combinations perform one step of a multi-step procedure. For the full procedure, see the next section, "Keyboard Procedures."

Formatting Characters

The table below shows the character formatting keys that toggle. Use the same key combination to apply and remove the format.

| For this format | Press |
|------------------|-----------------------------|
| Bold | Command-Shift-B |
| Italic | Command-Shift-I |
| Underline | Command-Shift-U |
| Word Underline | Command-Shift-] |
| Double Underline | Command-Shift-[|
| Dotted Underline | Command-Shift-\ (backslash) |
| Strikethru | Command-Shift-/ |
| Outline | Command-Shift-D |
| Shadow | Command-Shift-W |
| Small Caps* | Command-Shift-H |
| All Caps* | Command-Shift-K |
| Hidden | Command-Shift-X |
| | |

^{*}These formats affect only lowercase characters.

The table below lists key combinations that format characters but do not toggle. To return to normal text after applying these character formats, use the Plain Text key combination.

| For | Press |
|-------------------|------------------------|
| Plain Text | Command-Shift-spacebar |
| Font change | Command-Shift-E |
| Larger font size | Command-Shift-> |
| Smaller font size | Command-Shift-< |
| Symbol font | Command-Shift-Q |
| Subscript | Command-Shift- |
| Superscript | Command-Shift-+ |

Formatting Paragraphs

| For this format | Press |
|-----------------|------------------|
| Normal | Command-Shift-P |
| Side-by-side | Command-Shift-G |
| Style | Command-Shift-S* |
| Flush left | Command-Shift-L |
| Flush right | Command-Shift-R |
| Centered | Command-Shift-C |
| Justified | Command-Shift-J |

^{*}This key combination performs one step of a multi-step procedure. For the full procedure, see the next section, "Keyboard Procedures."

Indenting Paragraphs

| For this indent | Press |
|-----------------|-----------------|
| First line | Command-Shift-F |
| Nest | Command-Shift-N |
| Unnest | Command-Shift-M |
| Hanging | Command-Shift-T |

Spacing Within and Between Paragraphs

| For this spacing | Press |
|-------------------------------|-----------------|
| Double space within paragraph | Command-Shift-Y |
| Open space between paragraphs | Command-Shift-O |

Outlining with Keys

The table below shows how to perform outlining actions using keys. The second column lists keys to press on the Macintosh Plus keyboard. The third column lists keys for both the original Macintosh and the Macintosh Plus keyboards.

| То | In outline view, press | Press Command- Option-T then |
|-----------------------------------|------------------------|---------------------------------|
| Promote + | - | K or 4 on keypad |
| Demote → | - | L or 6 on keypad |
| Move heading up ↑ | 1 | O or 8 on keypad |
| Move heading down ◆ | | , or 2 on keypad |
| Demote heading to body text → | Command-→ | > |
| Expand text + | + on keypad | + |
| Collapse text - | - on keypad | - |
| Display to selected level 1 2 3 4 | | 1,2,3,4 (not on keypad) |
| Display all 🗏 | * on keypad | A |

Using Switcher

| То | Press |
|--|-----------------------|
| Slide current screen to the left; pull in screen from the right | Command-[|
| Slide current screen to the right; pull in screen from the left | Command-] |
| Return to Switcher | Command-\ (backslash) |
| Use QuickSwitch | Command-, (comma) |

Keyboard Procedures

Copying Text

- 1 Select the text you want to copy.
- 2 Press Command-Option-C.
- 3 Position the insertion point at the new location or select text to be replaced.

The insertion point is a dotted vertical line, and text you select is shown with a dotted underline.

4 Press Enter or Return.

Moving Text

- 1 Select the text you want to move.
- 2 Press Command-Option-X.
- 3 Position the insertion point at the new location or select text to be replaced.

The insertion point is a dotted vertical line, and text you select is shown with a dotted underline.

4 Press Enter or Return.

Searching for Formats

1 Select a character with the character format(s) you want to find or a paragraph with the paragraph format(s) you want to find.

If you select a paragraph, select it by double-clicking in the selection bar.

2 Press Command-Option-R.

Copying Formats

- 1 Select a character with the character format(s) you want to copy or a paragraph with the paragraph format(s) you want to copy.
 - If you select a paragraph, select it by double-clicking in the selection bar.
- 2 Press Command-Option-V.
- 3 Select the text you want to format.

 The selection is shown with a dotted underline.
- 4 Press Enter or Return.

Applying an Existing Style

- 1 Select the text you want to apply a style to.
- 2 Press Command-Shift-S.
- 3 Type the style name.
- 4 Press Return.

Inserting a Glossary Entry

- 1 Position the insertion point where you want the glossary entry.
- 2 Press Command-Backspace.
- 3 At the name prompt, type the name of the glossary entry you want to insert.
- 4 Press Return.

Collapsing Outline Subtext

- Select the heading above the text you want to collapse.
- 2 Press (minus) on the keypad.

Expanding Outline Subtext

- 1 Select the heading above the text you want to expand.
- 2 Press + (plus) on the keypad.

Using QuickSwitch

You can use QuickSwitch to quickly revise a graphic or a Microsoft Excel chart or worksheet that is in Word.

- 1 Start the graphics program (MacPaint or MacDraw) or Microsoft Excel.
- In Word, select the graphic, chart, or worksheet.

 If you select a Microsoft Excel chart or worksheet, type the following text on the line above the selected item, then format it as hidden text. For a chart, type Excel!filename; for a worksheet, type Excel!filename!areaname.
- 3 Press Command-, (comma) to move to the graphics or Microsoft Excel program window.
 If you move to a graphics window, the selected graphic from Word is pasted there.
- 4 When finished in the graphics program or Microsoft Excel, press Command-, (comma) to return to Word.

 The revised graphic, chart, or worksheet replaces the selection in Word.

To ensure that the entire graphic is returned to Word, do not move or resize it in the graphics program window. To return to Word without changing the original selection in Word, click the Switcher icon or press Command-[or Command-].

Using the Mouse

Selecting Text and Graphics

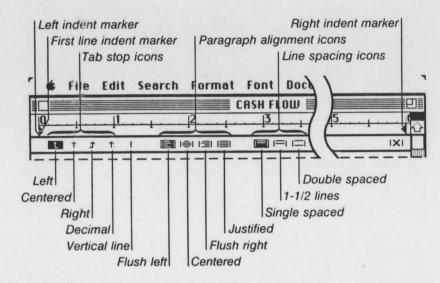

| To select | Do this |
|--------------------|---|
| Insertion point | Point and click. |
| Character | Drag over it. |
| Word | Double-click anywhere in it. |
| Line of text | Click in selection bar to left of line. |
| Sentence | Hold down Command key and click anywhere in sentence. |
| Paragraph | Double-click in selection bar next to any line in paragraph. |
| Column | Hold down Option key and drag across column. |
| Any amount of text | Drag over text. |
| Entire document | Hold down Command key and click in selection bar. |
| Extended selection | Move pointer from original selection to end of text you want to select, then Shift-click. |
| Block of text | Press Option-Shift or press Option, then drag mouse. |
| Graphic | Click inside it or drag over it. |

Mouse and Command Modifier Keys

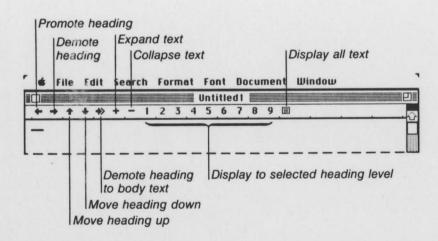

Some key combinations change the action of the mouse, and some change the shape of the mouse pointer to indicate the task you are performing.

| То | Press |
|---|--|
| Get help (pointer changes to ?) | Command-? |
| Add command to a menu (pointer changes to +) | Command-Option-+ |
| Subtract command from a menu (pointer changes to –) | Command-Option- |
| То | Do this |
| List all files | Press Shift and choose Open. |
| Repaginate (e.g., for font transfers) | Press Shift and choose Repaginate. |
| Sort in descending order | Press Shift and choose Sort. |
| Open footnote window | Press Shift, then drag split bar down. |
| Release left indent | Press Shift, then drag left indent marker (on ruler). |
| Adjust margins | Press Shift, then drag headers or footers in Page Preview. |

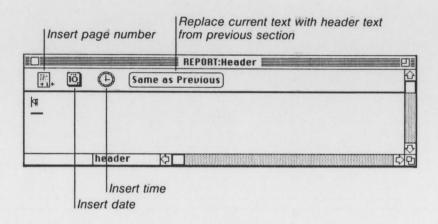

Ruler loons

Outlining Icons

Header and Footer Icons

Page Preview Icons

| То | Click this icon |
|---|--|
| Magnify part of the document | |
| Return from magnified view to regular display | ريس المراجع ال |
| Position page numbers on the page | ₩ 1 |
| Display margins, page breaks, section breaks, page number | * + |
| and header/footer positions Display one page at a time | |

Print Merge Instructions

Surround each instruction with « ».

- Press Option-\(backslash) to get «.
- Press Shift-Option-\(backslash) to get ».

The DATA instruction must always be the first instruction in the main document.

The following instructions are inserted into the main document:

■ «ASK field = ?»

Prompts you for the contents of the field before printing each form document.

■ «ASK field = ?prompt»

Sets your own prompt to ask you for the contents of the field before printing each form document. Field is any individual data item.

- «DATA data document»
 - «DATA header document, data document»

Names the data document (and, optionally, the header document) you want to combine with the main document.

«IF field = data»text...«ENDIF»

Sets up a condition under which the text you specify will be printed, if the information in the data document meets the condition.

«IF field = data»text...«ELSE»text...«ENDIF»

Sets up a condition under which the first text will be used; if this condition is not met, then the text following «ELSE» is used. Field is the name of the field—for example, name. Data is the corresponding information in the data document.

You can use a mathematical comparison operator (> or <) instead of an equal sign to specify a condition.

«INCLUDE document name»

Inserts the text of the document named in the instruction into the main document at the location of the INCLUDE instruction. (The number of documents you can include is limited only by disk space.)

■ «NEXT»

Goes to the next data record immediately, instead of waiting until the next copy is printed. This is useful if you want to print your data out as a list in one document, instead of merging the data into a form letter.

«SET field = data»

Sets a field equal to data that will not vary from copy to copy.

■ «SET field = ?»

Prompts you for data to print in a series of form letters.

■ «SET field = ?prompt»

Sets your own prompt to remind you to type the data for a series of form letters you want to print.
